GROUP 1 | Sales Bonus Calculator

Read the client conversation as a team. The client is describing their business, not giving you a finished requirements list.

Client conversation

Speaking: Sales manager

“We're growing our sales team, and payroll keeps asking me to explain how our bonuses work. Everyone gets their normal base salary, of course. The bonus is something extra, based on how much they sold during the month.”

“Most people don't earn a bonus until they really start selling. Once somebody gets past ten thousand dollars in monthly sales, we pay a bonus equal to ten percent of their sales. Our top performers get a better rate: if they go over twenty thousand, the bonus is fifteen percent of sales instead. We don't add the two bonuses together; they get the higher rate.”

“There is one exception for new employees. If they've been here less than three months, we don't want to pay more than five hundred dollars in bonus yet. Someone in payroll should be able to enter the employee's salary, monthly sales, and time with the company and see their total pay for the month.”

“I think that's everything. Oh, make sure the calculation works for people who are right around those sales targets. Those numbers come up a lot.”

Your assignment: Extract the rules, list inputs and outputs, identify questions for the client, and draw a flowchart showing the full process. Test at least three cases. No coding required.

You may ask your instructor questions as though they are the client. Do not assume a missing rule without discussing it.

GROUP 1 | WORKSPACE

1 What does the client want the software to do?

2 Business rules you identified

3 Inputs and outputs

4 Questions to ask the client

5 Draw your flowchart on a separate sheet or in a diagramming tool. Include every decision path and outcome.

6 Test three examples: a normal case, a different outcome, and a boundary or unusual case. Write the inputs and expected results below.

TEST	INPUTS / CONDITIONS	EXPECTED RESULT
Normal		
Different outcome		
Boundary / unusual
