GROUP 3 | Movie Ticket Pricing

Read the client conversation as a team. The client is describing their business, not giving you a finished requirements list.

Client conversation

Speaking: Movie theater manager

“Our ticket prices are getting complicated, especially on Tuesdays. A normal adult ticket is twelve dollars. Kids younger than thirteen only pay six dollars, and seniors who are at least sixty-five pay eight dollars.”

“We also give students two dollars off a ticket. They might be adults or in one of the other age groups, so I'd like the discount to work with whichever ticket price they qualify for. Then there's Tuesday: every ticket is twenty percent off that day.”

“I'd like the person selling tickets to enter the customer's age, whether they're a student, and the day of the week, and then see the ticket price. We don't want the cashier memorizing all these combinations.”

“I haven't really thought through how the student discount and the Tuesday sale interact when someone qualifies for both. We'd need to decide that before launch.”

Your assignment: Extract the rules, list inputs and outputs, identify questions for the client, and draw a flowchart showing the full process. Test at least three cases. No coding required.

You may ask your instructor questions as though they are the client. Do not assume a missing rule without discussing it.

GROUP 3 | WORKSPACE

1 What does the client want the software to do?

2 Business rules you identified

3 Inputs and outputs

4 Questions to ask the client

5 Draw your flowchart on a separate sheet or in a diagramming tool. Include every decision path and outcome.

6 Test three examples: a normal case, a different outcome, and a boundary or unusual case. Write the inputs and expected results below.

TEST	INPUTS / CONDITIONS	EXPECTED RESULT
Normal		
Different outcome		
Boundary / unusual
