GROUP 4 | Loyalty Points System

Read the client conversation as a team. The client is describing their business, not giving you a finished requirements list.

Client conversation

Speaking: Customer loyalty coordinator

“Our store has a rewards program, and I want the register to calculate points automatically. Customers earn points based on how much they spend and their membership level.”

“Regular members get one point for every dollar spent. Silver members earn one and a half points per dollar, and Gold members earn two points per dollar. We sometimes run a double-points day, and on those days everybody's points are doubled, no matter which membership they have.”

“At checkout, the cashier should be able to enter the purchase amount, the membership level, and whether today is a double-points day. Then the customer should see how many points they earned.”

“One thing we haven't settled is what to do with fractional points. Some purchases don't come out to whole dollars, so I suppose we'll need a consistent rule.”

Your assignment: Extract the rules, list inputs and outputs, identify questions for the client, and draw a flowchart showing the full process. Test at least three cases. No coding required.

You may ask your instructor questions as though they are the client. Do not assume a missing rule without discussing it.

GROUP 4 | WORKSPACE

1 What does the client want the software to do?

2 Business rules you identified

3 Inputs and outputs

4 Questions to ask the client

5 Draw your flowchart on a separate sheet or in a diagramming tool. Include every decision path and outcome.

6 Test three examples: a normal case, a different outcome, and a boundary or unusual case. Write the inputs and expected results below.

TEST	INPUTS / CONDITIONS	EXPECTED RESULT
Normal		
Different outcome		
Boundary / unusual
