GROUP 5 | Insurance Premium Adjustment

Read the client conversation as a team. The client is describing their business, not giving you a finished requirements list.

Client conversation

Speaking: Insurance office manager

“We want to help our agents estimate a driver's monthly insurance premium. Everybody starts with a base premium of one hundred dollars per month, but we make a few adjustments based on the driver and their car.”

“Younger drivers cost us more, so if they're under twenty-five, we add twenty-five percent to the base premium. For drivers older than sixty-five, we offer a ten-percent discount. We also charge twenty dollars for each accident they've had in the past three years.”

“Sports cars carry an additional fifty-dollar monthly fee. An agent should enter the driver's age, recent accident count, and whether the vehicle is a sports car, and the system should show the estimated monthly premium.”

“We should be clear about what the percentages apply to. I don't want two agents using the same facts and coming up with different numbers.”

Your assignment: Extract the rules, list inputs and outputs, identify questions for the client, and draw a flowchart showing the full process. Test at least three cases. No coding required.

You may ask your instructor questions as though they are the client. Do not assume a missing rule without discussing it.

GROUP 5 | WORKSPACE

1 What does the client want the software to do?

2 Business rules you identified

3 Inputs and outputs

4 Questions to ask the client

5 Draw your flowchart on a separate sheet or in a diagramming tool. Include every decision path and outcome.

6 Test three examples: a normal case, a different outcome, and a boundary or unusual case. Write the inputs and expected results below.

TEST	INPUTS / CONDITIONS	EXPECTED RESULT
Normal		
Different outcome		
Boundary / unusual
