GROUP 6 | Store Discount Rules

Read the client conversation as a team. The client is describing their business, not giving you a finished requirements list.

Client conversation

Speaking: Retail store owner

“Our checkout discounts have become difficult for new cashiers to remember. For smaller purchases, under fifty dollars, there isn't a purchase-size discount. When the purchase is between fifty and one hundred dollars, we take five percent off. For purchases over one hundred dollars, we take ten percent off.”

“Customers who are members also get another five percent off. But here's the tricky part: anything that's already on sale can't receive any additional discount. We don't want people stacking coupons or discounts on sale merchandise.”

“I'd like the cashier to enter the purchase information and whether the customer is a member. The register should calculate the final amount to pay, rather than leaving the cashier to figure it out.”

“We often have baskets with a mix of regular-price and sale items. We should probably talk through how that affects the purchase thresholds before someone builds this.”

Your assignment: Extract the rules, list inputs and outputs, identify questions for the client, and draw a flowchart showing the full process. Test at least three cases. No coding required.

You may ask your instructor questions as though they are the client. Do not assume a missing rule without discussing it.

GROUP 6 | WORKSPACE

1 What does the client want the software to do?

2 Business rules you identified

3 Inputs and outputs

4 Questions to ask the client

5 Draw your flowchart on a separate sheet or in a diagramming tool. Include every decision path and outcome.

6 Test three examples: a normal case, a different outcome, and a boundary or unusual case. Write the inputs and expected results below.

TEST	INPUTS / CONDITIONS	EXPECTED RESULT
Normal		
Different outcome		
Boundary / unusual
